TABLE TENNIS PRODUCTS AVAILABLE WORLDWIDE AND WITH OVER 50 YEARS OF EXPERTISE, LION IS A TRUSTED BRAND FOR TOP ATHLETES AS WELL AS FOR LEISURE PLAYERS. OUR TEAM OF EXPERTS DEVELOP AND WORK WITH CURRENT TECHNOLOGIES TO OFFER THE LATEST INNOVATIONS IN TABLE TENNIS.
1 INFORMATION & TECHNOLOGY - BLADES

SPECIAL MATERIAL FOR TENNIS TABLE BLADE

TITANIUM
a light, strong, lustrous, and corrosion resistant (including resistance to sea water and chlorine) transition metal. It is the strongest transition metal used in table tennis. With its high strength-to-weight ratio and high value tensile strength ratio, it allows the greatest energy transferal from user’s motion through to the speed of the ball.

GLASSFIBRE
with its elongation properties, it absorbs the energy of the opponent’s power shot. It changes most of the opponent’s energy into sound energy.

TRANSITIONAL CARBON (TSC) AND TRANSITIONAL CARBON 2 (TSC 2)
TSC are fibres that are knitted in one direction with other high tensile strength fibres. TSC2 have 2 directional fibres that are knitted in X-Y directions. Both types of carbon give high tensile strength and allows great energy transferal.

CARBON FLEECE
extremely fine carbon fibres, in a fluffy hair like state layered to give balance control and energy to user.

TEXA FIBRE
a new generation of materialized fibre that gives extreme levels of tensile strength. When combined with various types of hard wood veneer, this fibre will give the user great stabilization, control as well as a powerful performance.

TRANSITIONAL CARBON 3
knitted with 2 directional fibres in X-Y directions. It supports energy transferal and allows high tensile strength.

TYPES OF HANDLES
All models can be made in the following shapes except for the Japanese Penholder

- Concave
- Straight
- Conical
- Anatomic
- Chinese Penholder
CARBOZONE

Model: CARBONZONE AR+
A 5+2 blade constructed with Regitec outer veneer and soft carbon at inner core. The result of this composition gives the player a good ball impact during a long rally. Regitec technology can give the player a better power transferal than the normal blade.

Model: CARBONZONE OFF
An offensive 5+2 blade constructed with Regitec outer veneer and carbon fiber near the outer surface. The result of this composition has created a very rigid blade that gives the player to make powerful shot.

Model: CARBONZONE OFF+
An offensive 5+2 blade constructed with Regitec outer veneer and carbon fiber near the outer surface. The result of this composition has created an extra rigid blade that gives the player to make fast and powerful strike.

MANTIS

Model: MANTIS AR
A 5 plies wooden blade constructed with Cypress outer veneer and Ayous core. The result of this composition gives the player a superb ball impact. It is the perfect balance composition for an all-round player.

Model: MANTIS AR+
Using a thin Beech and medium thickness Limba as the outer and second plies, and then Ayous at the center. This composition gives the player a balance in control and as well as fast plays.

Model: MANTIS OFF
A new combination of a 7 plies wooden blade. Using a hard outer Veneer Ash surface, plus medium & soft density Kiri at the center core. This composition gives the player an amazing new ball impact feeling. It is the new generation of a 7 plies blade.

Model: MANTIS CARBON OFF
Due to the introduction of plastic ball, we must create a new carbon blade to adopt this ball. Using the new African hard wood as the outer plies and combined with carbon fiber as the inner material, this composition gives the player an aggressive ball impact feeling.

MODE

Model: MODE μ OFFENSIVE+
It is an offensive blade with basalt carbon fibre equipped. With this fibre placed inside this blade, it allows the ball to hold for a second more and allows user easier to loop. All wooden layers are being thermolized with Regitec and increase its sensational feel of ball control.

Model: MODE μ OFFENSIVE-
An offensive blade with basalt fibre in use. Slightly less power than the carbon fibre blade but increase the amount of stability. With Regitec used on the outer plies, it allows better control at close table shot.

Model: MODE ALLROUND+
A thin design 5+2 plies blade with basalt fleece used closely to the inner core. An extreme ease of control due to its light weight design and a blade that is close to the wooden blade feel. A blade that can combine to all kinds of rubber for different kind of moves.

ARATRON

Model: Aratron Def
It is an unique defensive blade with aratox fibre placed at the centre of the blade. With the combination of wood from hard outer plies to softer one with the inner plies, it gives a superior control capability to the user.

Model: Aratron All+
A special structure 7+3 blade with 2 layers of basalt fleece and a layer of aratox fibre in the centre. Similar to the performance to Aratron Def, the two extra layers of basalt fleece gives the user additional power for offensive moves. Balance out both of the performance of offensive and defensive move.
INFORMATION & TECHNOLOGY- RUBBER

FOAM CORE
The handle is filled with foam to act as a shock absorbent tunnel upon impact. Vibration is significantly minimized and allows user to have optimal precision.

SHOCK ABSORBER TUBE
Shock absorber tube is the most effective technology used to eliminate vibration. Inside the hollow handle, a rigid tube is inserted with a rubber ring connected to the end. This particular configuration converts the vibration through the tube into sound energy, as well as reducing the bounce back energy caused by dense particle media. This provides maximum speed and control.

COMFORT HANDLE
The handle base is finished with an EVA (Ethylene Vinyl Acetate) semi-sphere shape. This helps minimize vibration and improve comfort during use.

EDGE GUARD SYSTEM
An innovative wooden blade technology that reduces the loss of energy. Upon impact of the ball to the blade, the Edge Guard acts as a barrier to rebound the energy faster, allowing greater momentum for a powerful smash.

RIGITEC
Special treatment technology that dehydrates wood. This improves rigidity in the plywood, and reduces the weight of the wooden blade.

RUBBERS

LIST OF LION APPROVED RUBBER
All models can be made in the following shapes except for the Japanese Penholder

| 1STAR | ELITE CONTROL | XA-900 | ROAR |
| 2STAR | ALLROUNDER | TYPHOON | CLAW |
| 3STAR | AGRESSOR | MANTLET | ROAR |
| 5STAR | INTERNATIONAL | SCIROCCO | SC-900 |
| SUPER3 | INTERNATIONAL | SCIROCCO | FIREARMS |

RADIANT (PIP-IN)
Lion Radiant has the adhesiveness of traditional Chinese rubbers combined with the speed of German and Japanese rubbers. Radiant is not factory tuned which allows its to be durable whilst being light weight. The new top-sheet permits an extra thick sponge to be used which increases the dwell time and rebound power without decreasing control. This rubber is ideal for both looping and quick attack. Radiant is recommended for players playing close to the table.

CLAW (PIP-OUT, LONG PIMPLES)
Lion Claw with EZLASTIC: the combination of various chemical and physical theories which formulated this tremendous long pimple rubber for the new era of table tennis. The new EZLASTIC technology gives the Claw rubber pimplies to be wrinkled and reduce the actual contact between the ball and rubber when opponent loops the ball to you. Not only those, EZLASTIC can make the pimple to absorb the fore-coming energy of the ball to its maximum and turns it to the force of momentum to return the ball to your opponent without changing the spin direction of the ball.

TRAPPER (PIP-OUT, LONG PIMPLES)
The long pimple rubber that developed for the new plastic ball. This rubber allow player to make effective blocking of all kinds. Trapper gives a high level of control which makes easy to push over the table and blocking against topspin shot.

ALLROUNDER (PIP-IN)
This rubber uses rubber weight reduction technology, which helps to increases softness. Users can easily make fast loops with this rubber. Great for skill development.

SS600 (PIP-IN)
Excellent rubber to create contrast of spin whilst maintaining compatible control. The sticky surface provides maximum spin and power for fast loop players.

SCIROCCO (PIP-IN)
Designed to offer ideal combination between attack and defense. It allows users to maximize control of the ball whilst still providing excellent spin and speed. Ideal for all round players.

FIREARMS (PIP-OUT, SHORT PIMPLES)
Firearms is a new and unique short pimple-out rubber for professional players. This rubber uses a soft, elastic, rough semi-top sheet which combined with a hard yet highly elastic sponge. This provides an exceptional built-in speed-gluing effect. Its main strength is demonstrated when versus short and dangerous placements of blocked or undershot balls. The dispersive effect of this rubber is as effective as long pimple-out rubbers but with the increased success of attacking almost every ball.

MANTLET (PIP-IN)
Lion “Mantlet” is a new kind of “Anti” rubber. It combines a soft dampening sponge with a thin and hard top-sheet that is very slippery, but not totally frictionless. “Mantlet” is very slow and power absorbing. It is completely insensitive to incoming spin. By comparing to similar rubbers without any friction, “Mantlet” can be played more effective and unpredictable. “Mantlet” is the first rubber of a new generation of anti-spin rubbers, which will make your game even more dangerous, confusing your opponent not only for one moment, but for the whole game until your victory!

ROAR (PIP-IN)
Lion Roar with EZLASTIC the combination of various chemical and physical theories which formulated this tremendous pimple-in rubber for the new era of table tennis. The new EZLASTIC technology gives the Roar rubber a brand new feeling. EZLASTIC allows the rubber pimple to wobble to its maximum degree which easily allows the user to drive and loop. Not only those, EZLASTIC can make the pimple to absorb the fore-coming energy of the ball to its maximum and turns it to the force of momentum to push and smash the ball.

XA900 (PIP-IN)
Suitable for aggressive players, this rubber offers high speed whilst being lightweight. It allows user to efficiently serve top spin and play fast loops at high speeds. It also offers superb ball control.

AGGRESSOR (PIP-IN)
This rubber is ideal for fast offensive players to break the opponent’s defense.

ELITE CONTROL (PIP-IN)
Reinforced Chinese sticky rubber constructed with Western rubber technology. Suitable for all round players.

Post with a switch to adjust the net height and an adjustable screw under for fixing. Post is made out of steel to provide extra stability. Printed corrugated box pack.

BAGS AND ACCESSORIES

BATICOVER
Model no. TS-4001
For one bat and ball pocket behind

SIGNATURE BLADE
Model no. TA-705
For the use of signatures. Size = 287 x 420 mm

PLASTIC RULER
Model no. TA-707
For measuring and setting up net height against the table tennis rule. It also can be used for checking the rubber thickness against the ITTF regulations.

POINT COUNTER
Model no. TA-708
Foldable PVC point counter, points up to 21 and 5 sets. Timeout card is also included.

BALLBAG
Model no. TS-3003
For 144 pcs of balls. It can also be used for storing other table tennis gears.

RUBBER PROTECTOR
Model no. TA-806
PVC cover to protect the bat surface from dirt and dust.

MINI BAT KEYCHAIN
Model no. TA-701
A wooden mini bat keychain with table tennis rubber and sponge. Size = 37 x 55 mm
### TABLE TENNIS TABLES

**Model: ZED**
- **A unique design which stands out from the traditional table tennis table**
- **2 x bat holders along the table frame which can hold up to 2 bats in each holder**
- **2 x ball holders along the table frame which can hold up to 7 balls in each holder**

**SPECIFICATION:**
- **ART NO.:** V-005
- **TYPE:** Indoor table
- **SIZE (official size table):** 2740 (L) x 1525 (W) x 760 (H) mm
- **TABLE TOP COLOUR:** Black
- **MATERIAL / THICKNESS:** MDF board / 18 mm
- **FRAME SIZE:** 20 x 50 mm
- **LEG SIZE:** 60 x 60 mm
- **WHEEL SIZE:** 100 mm diameter (4 pcs)
